

The Earth First! Winter Moot

A weekend get-together for people involved in ecological direct action, from fighting opencast coal, fracking, GM, nuclear power to road building. There'll be discussions and campaign planning - with the emphasis on the tactics and strategies we use, community solidarity and sustainable activism.

This year we'll be in Lancashire, the testing ground for fracking, which is set to be rolled out across the country. The last 18 months have seen lots of local groups springing up in resistance. The weekend is also an opportunity for people from around the country and local anti-fracking campaigners to share tips and info.

Can I come? Anyone who is interested in ecological direct action will have a valuable part to play and should come. You are welcome to come to all or part of the weekend.

Programme: Workshops and discussions from **Fri 6pm** until late **Sun afternoon**, plus evening fun. More details on our website. Please get in touch with offers of workshops, facilitation or any thoughts.

Transport: Nearest train station is **Preston** with buses to the venue. More details from our website.

What to bring: Most of the sleeping accommodation will be on the floor in the meeting venue, so bring sleeping bag and mat. If you require a bed please get in touch at least one week in advance.

Food: Vegan meals will be provided at cost price. Please tell us if you are coming, so we can get the right amount of food.

Cost: £20-£30 from each person to cover all costs including food. (If you really can't afford this, please come anyway and give what you can).

If you have any particular accommodation, access or dietary needs or are bringing children please tell us asap but at least one week in advance so we can plan suitable facilities.

Fracking is threatening to sweep across the world as the latest attempt by the fossil fuels industry to squeeze the last drops out of the earth on our march towards irreversible and catastrophic climate change.

In this country they are still exploring its viability and the government has yet to give fracking the final green light on safety and environmental grounds. France and Bulgaria are not going ahead and several US states have banned the process as it causes air and water pollution, as well as bringing a constant stream of tankers and wagons through towns and villages. More info: frack-off.org.uk
